

**Astrid Morreale**

UNIVERSITY OF CALIFORNIA @ RIVERSIDE

I'm a Ph.D student at the University of California Riverside, currently involved in the PHENIX experiment at BNL. In PHENIX, my physics focus is the spin structure of the proton, in particular, the gluon's polarization within the nucleon. I look at charged pion production asymmetries (and cross-sections) since we expect that the differences among positive, neutral and negative pion asymmetries are sensitive to the sign of the gluon polarization.

I also love futbol (soccer) matches and gelato.
