

Guillaume Robert-Demolaize
BROOKHAVEN NATIONAL LABORATORY

I started as a research associate in January 2007 in the C-AD department, working on both RHIC and the US-LARP (LHC Accelerator Research Program) collaboration. I was also involved in the RHIC operation shifts for machine development. As for my work within US-LARP, I'm working on various scenarios for luminosity upgrade, to improve the efficiency of the LHC collisions.

Having been on the "user" side of ASAP, since the board is being replaced, I thought I would apply for it so that new members can experience it the same way I did: a nice, friendly place to share quality time with other post-docs and/or graduate students.
