

Meng Li

State University of New York at Stony Brook

I am a graduate student from Stony Brook University, and I spend most of time working in Chemistry Department at BNL. My research involves electrocatalysis in alcohol (menthol, ethanol, etc.) oxidation reactions, and potentially they can be used in low temperature fuel cells.

I've been working in BNL for more than two years, and have attended numerous ASAP Thursday gatherings. I had great time and met lots of new friends here. Now I would be very happy to help keep ASAP being a relaxed and entertaining place for all students and post-docs.
