

Dié Wang

ASAP Member at Large

I am a postdoctoral research associate in the Environment and Climate Sciences Department. I joined my current Cloud Processing Group in February 2017 after graduated from Pierre and Marie Curie University in France. My research interests have been focused on deep convective clouds using ground-based measurements and the improvement of regional to global climate modeling capabilities.

I got to know ASAP through the annual barbecue event. I was impressed by the ASAP members' efforts and would like to be part of the team to help organize social events. That will be a great opportunity for me to know many excellent researchers from different fields.
