

Liang Song

ASAP Treasurer

I am a PhD candidate from the Department of Materials Science and Engineering at Stony Brook University and am currently working in the Surface Electrochemistry and Electrocatalysis Group in the Chemistry Department at BNL. My research is focused on developing electrocatalysts for fuel cell applications.

I got to know ASAP through activities such as the annual barbecue and the Early Career Researcher Symposium. These well-organized events provided students, postdocs and researchers a perfect stage to meet and communicate. Joining ASAP gives me an opportunity to learn from and work with experienced members as well as to contribute my strength and energy to serve the ASAP community.
