

Yiyao Tian

ASAP Member at Large

I am a doctoral candidate in the Department of Materials Science and Chemical Engineering at Stony Brook University. I am conducting my research in the Structure and Dynamics of Applied Nanomaterials Group in the Chemistry Department at BNL. I have been investigating filtration materials for chemical warfare agents since October 2016.

As a graduate student working at BNL, I'd like to reach out and contribute to the community. I've been to some of the great events hosted by ASAP, and I could see that ASAP can bring researchers together and get me opportunities to know them. And I would also like to devote myself to work with them as a team and bring more interesting and meaningful events for the BNL researcher community.
