## ASAP Member at Large

I am a postdoc in the Electrochemical Energy Storage (EES) Group at the Chemistry Department since November 2017. Before joining the EES group as a postdoc, I was a visiting student in this group since November 2016. I received my PhD from Fudan University, Shanghai, China in October 2017. My research is focused on structural characterization of electrochemical energy storage materials by synchrotron X-ray based diagnostic techniques as well as investigation of electrolyte additives for lithium metal anode.

I had a wonderful experience when I presented my research work at the Early Career Researcher Symposium (ECRS) in 2017 and volunteered at ECRS in 2018. I've made some great new friends during ECRS who have enriched my research life at BNL. I look forward to working with my fellow ASAP members. Let's make 2019 even better.
