

Investigation of Tuning Shims in Q2pF

Ramesh Gupta
August 1, 2023

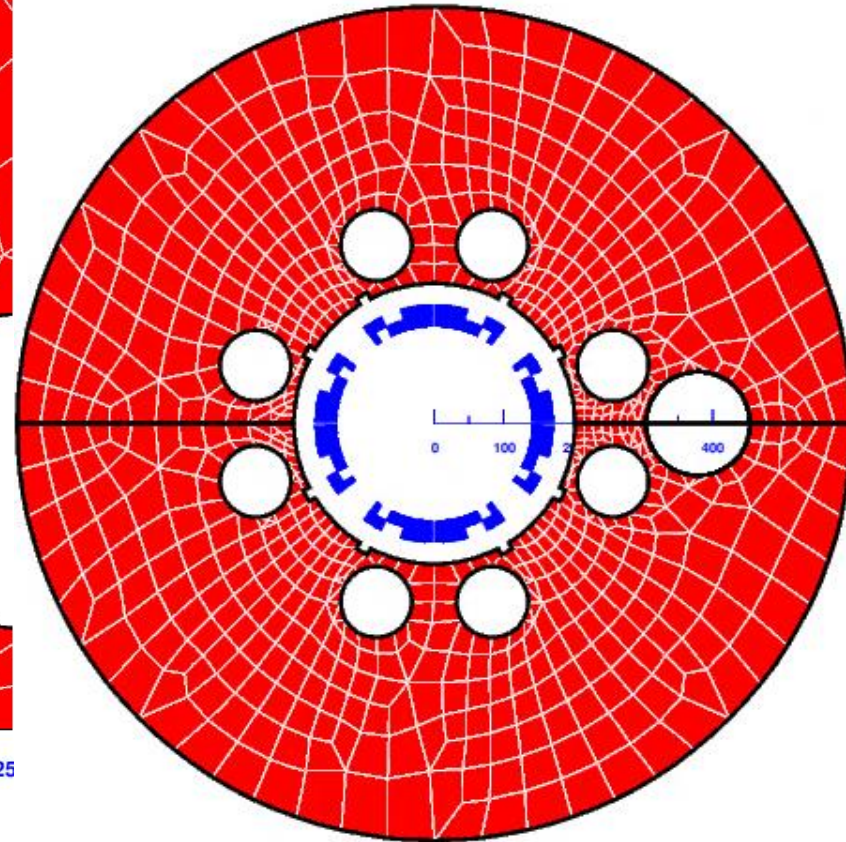

Slot for tuning shims starting at 27° (10 mm deep, 5° wide, 8-fold symmetry)

➤ Several variations have been examined

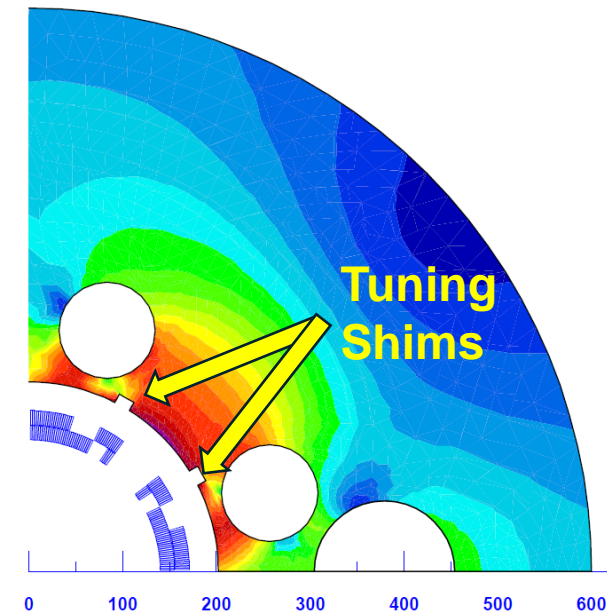

0 20.83 41.67 62.5 83.33 104.17 125 145.83 166.67 187.5 208.33 229.17 25

```

- Max correction in b6 & b9 = 0.1 units, need more
(depends on the size, shape and location of the cutout)

Slot for tuning shims starting at 27° (10 mm deep, 5° wide, 8-fold symmetry)

➤ Dependence of correction on field
(values at the high or design field)

No
Slot

➤ Max change in b6 ~1 units (different from LF)
Can something be done to minimize the swing?

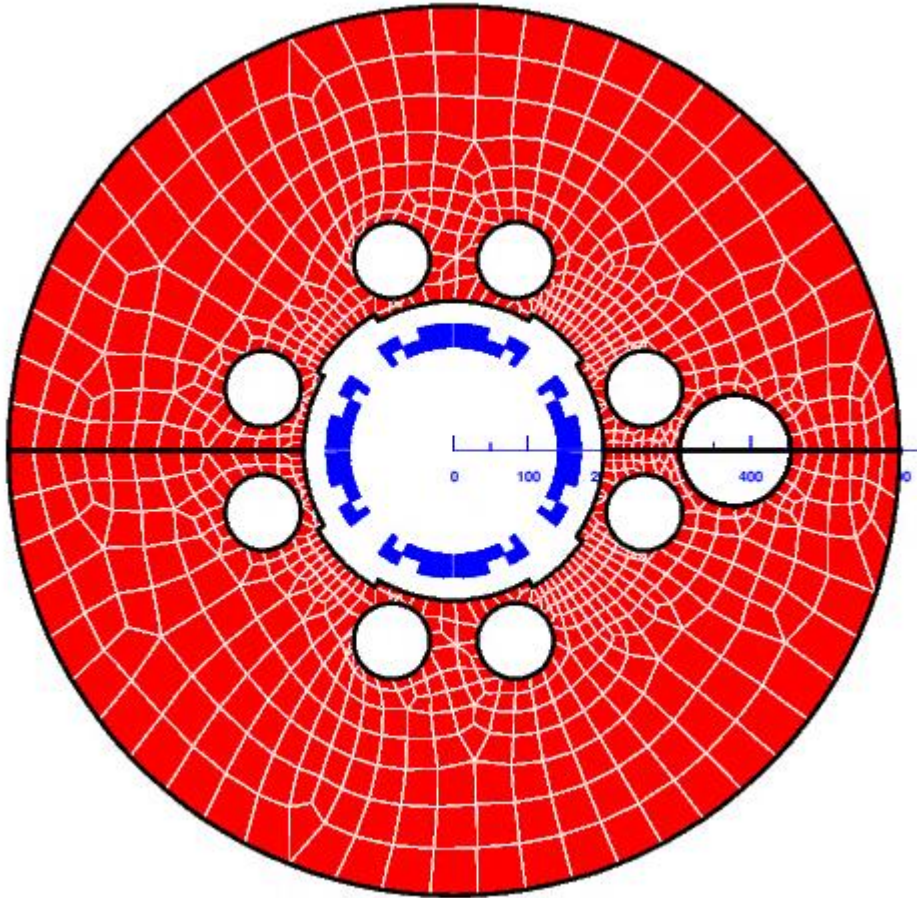

A few of several cases of tuning shims examined

Asymmetric Cutout (two tuning shims)

- All b_n expected (no skew harmonics due to top-bottom symmetry)

Cutout in octant 1 (and also in octant 8) is different from others

Asymmetric Cutout (two tuning shims)

- All bn expected (no skew harmonics due to top-bottom symmetry)

No Slot
